

# Scene Restart Package

## **What does this package do?**

This package provides a UI button to restart the desired scene specified in the code that can be changed to accommodate for desired function. The text, placement and size of the button can be adjusted to your liking easily.

## **What do you need?**

A unity scene that can utilise a restart button for a scene.

## **What limitations does this package have?**

The name of the scene that is desired to restart will need to be added into the code to make sure that the correct scene is reloaded. Additional code is required to hide this function until a specific moment.

## **Sample Scene**

The sample scene has a simple UI overlay with a restart button that when pressed will restart the scene from the beginning.
